

WEBSITE CLIENT SURVEY

Client input is the foundation on which successful websites are built. This survey will help you articulate and identify the overall goals of your site design, including specific questions regarding message, audience, content, look and feel, and functionality. Each key decision-maker should fill out his or her own survey, answer each of the questions in a thorough but brief and clear manner, and add any additional notes or comments at the end of the survey. When finished, all compiled information should be emailed back to Studio 108.

General Information

1. What is the name of your company and your current (or intended) URL?
2. What is your intended launch date for the new site? Are there any outside considerations that might affect the schedule (i.e., PR launch, tradeshow, etc)?
3. Do you have a specific budget range already established for this project? Can this project be divided into phases to accommodate budget and timing constraints?

Audience/Desired Action

1. Describe a prospective user coming to your site. How often is the user online, and what does he generally use the web for? How old is the user and what does he do for a living? (Use as much detail as possible in profiling your target user. Profile more than one type if appropriate.)
2. What is the primary "action" the user would take when coming to your site (make a purchase, become a member, search for information)?

3. What are the key reasons why the target user would choose your company's products and/or services (cost, service, value)?

Perception

1. Use a few adjectives to describe how the user should perceive the website. (Examples include prestigious, friendly, corporate, fun, forward thinking, innovative, and cutting edge.) Is this different than the current image perception?
2. How is your company currently perceived offline? Do you want to carry the same kind of message through your website?
3. How does your company differentiate itself from competitors? Do you think your current audience differentiates you from your competition? Please list competitor URLs.
4. List the URLs of any sites you find compelling. What specifically do you like about these sites?

Content

1. Will this site use existing content from existing sources? If so, what is the source, who is responsible for approval, and has the content been audited? If not, will you be creating content in-house or using an outside provider?

2. What is the basic structure of the content, and how is it organized? This would be the navigation, or pages, you would like to see on the site.
3. Describe visual elements or content that should be utilized from your current site or marketing materials (logo, color scheme, navigation, naming conventions, and so on).
4. Do you already have a sitemap or outline for the proposed design?

Technology

1. What is your target platform and browser (if you know)?
2. Are there specific technologies (Flash, JavaScript, Real Audio) that you would like to use in the site? If so, how will they enhance the user experience? Please describe in detail.
3. Will you have database functionality (dynamic content generation, search capabilities, personalization/login)? Do you already have a database in place? Please describe it in detail, including specific information regarding existing programs and software.
4. Will you have a need for secured transactions (e-commerce)? Do you already offer transactions online? Please describe in detail.
5. Will you require other specific programming needs (such as personalization or search capability)? Please describe in detail.

Marketing/Updating

1. How will most people find out about your website?
2. Briefly, what are your short-term marketing plans (specifically, for the site design and the 12 months following launch)?
3. Do you have an existing or planned marketing strategy in mind to promote this site design? If so, please describe.
4. Do you intend to keep the site updated? If so, how often? Who will be responsible for updating and providing content? Would you be interested in having a Content Management System (CMS) in place so you can do your own updates?

Additional Notes/Comments
